+44 7587 596191 · sushmabilidale@gmail.com · [LinkedIn](#) · United Kingdom · Graduate Visa (Right to Work until June 2027)

Data analyst with four years of experience turning complex, high-volume datasets into evidence that changes decisions. I work across SQL, Python and Power BI, and I am equally comfortable presenting findings to senior stakeholders as I am cleaning and modelling the underlying data. My work has directly shaped commercial strategy from identifying churn risk and retention opportunities in a 50-client enterprise

CORE SKILLS

- SQL — complex queries, aggregation, data validation
- Python (Pandas, NumPy) — cleaning, transformation, ETL
- Power BI — dashboard design, stakeholder reporting
- Descriptive, inferential & predictive analysis
- Customer segmentation & churn modelling
- Advanced Excel — pivot tables, XLOOKUP, modelling
- REST API data consumption & validation
- NoSQL pipelines (MongoDB, CouchDB)
- Cross-functional stakeholder engagement

WORK EXPERIENCE

Operations Supervisor & Data Analyst | Yakinori

Jun 2024 – present · Birmingham, UK

- Built and maintain daily Power BI dashboards tracking sales across 200–300 transactions, customer segments, traffic sources, and time-based demand patterns, giving management a clear picture of performance at a glance rather than relying on end-of-week summaries.
- Built RFM-style analysis for loyalty club members, tracking how many joined, how many are active, and how many are using discounts. Used Power BI to display the data and Python and Excel to clean it.
- Use SQL and advanced Excel (pivot tables, XLOOKUP, data modeling) to analyze product performance and demand trends; findings directly inform upselling and menu promotion decisions.
- Apply Python (Pandas) to automate the EOD report, cutting time spent by managers by 85%, from 30 minutes to just 5 minutes per report.
- Identify recurring patterns in customer acquisition (walk-ins, referrals, review platforms, discount services) and translate these into actionable recommendations on where to focus promotional effort.

Data Analyst — Customer Analytics & Operations | Ishan Technologies

Mar 2023 – Dec 2023 · Bangalore, India

- Managed analytics across a portfolio of 50+ enterprise clients, using data to identify early signals of churn risk and building tailored retention plans. Client retention improved measurably over the year.
- Led onboarding analytics for regional service expansions, standardising setup tracking and building dashboards to monitor time-to-value; gave leadership visibility into where clients were stalling and why.
- Implemented JIRA-based agile tracking and internal reporting dashboards that brought fragmented cross-team workflows into one clear view, reducing service delivery delays.
- Built quarterly strategy analysis for key accounts, identifying upsell patterns, revenue growth opportunities and risk signals, and presented findings directly to account leadership.

Junior Data Analyst | AirFi Aero

Mar 2022 – Feb 2023 · Bangalore, India

- Designed automated data pipelines from MongoDB and CouchDB into Excel via Power Query, turning raw NoSQL transaction data into structured, refreshable dashboards, eliminating a recurring manual reporting cycle.
- Identified fraudulent and duplicate payment patterns through transaction analysis; collaborated with engineering teams to close the API validation gaps causing the issue, reducing duplicate transactions.
- Integrated and analysed user behaviour data via Piano Analytics and Tag Manager, tracking feature adoption and content performance to give product and airline stakeholders a reliable engagement picture.
- Consumed and validated data from REST APIs, catching payload inconsistencies and working with developers to improve event tracking reliability across the platform.

EDUCATION

MSc Engineering Management | Aston University

Jan 2024 – Jan 2025 · Birmingham, UK

Grade: 2:1 · Modules: Forecasting & Decision Models, Operations Research, Supply Chain Analytics, Quality & Risk Management, Project Reporting & KPIs

BEng Electrical Engineering | Oxford College of Engineering

Aug 2018 – Aug 2022 · India

Grade: 2:1 · Modules: Statistical Modelling, Control Systems
